GoCheck Kids is an FDA-registered pediatric vision screening device. It allows you to detect amblyopia risk factors in children too young for a visual acuity test. It's been validated in 4 peer-reviewed studies and has detected amblyopia risk factors in over 50,000 children.

What is Pediatric Vision Screening?

Pediatric vision screening is used to determine refractive errors and identify risk factors for amblyopia. It detects amblyopic risk factors such as hyperopia, myopia, and anisometropia and estimates their severity.
