

The only articulation
test that uses a
“sound values”
weighting system

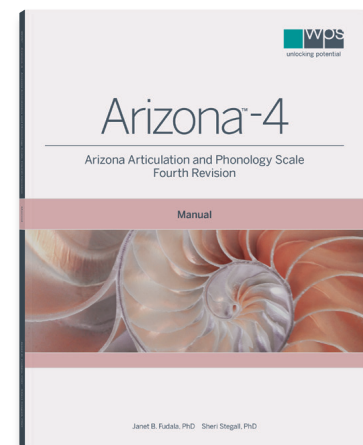

The Arizona-4 helps speech–language pathologists quickly and accurately assess articulatory and phonological impairment in one easy-to-use measure!

New norms, refined measurement properties, and the addition of connected-speech and phonology tests help clinicians identify those who could benefit from speech sound services.

The Newly Revised Arizona-4 Features

- Three tests in one assessment: Word Articulation, Sentence Articulation, and Phonology
- All-new normative data that provides standard scores for all three measures
- The only articulation test to offer speech intelligibility scores based on sound values that weight the likelihood that the sound will be heard in everyday speech
- Extension of the standardized age range through 21 years, 11 months, with guidance for describing and understanding the speech of adults of all ages
- Refinement and expansion of supplemental qualitative tasks
- **FREE** online scoring through the WPS® Online Evaluation System™ (platform.wpspublish.com)
