

hunet

L&D First Mover

Work First, Learning Second

The AI-Powered approach turns learning into real-world experiences

Hunet makes the era of generative AI real with its up-to-date learning-supporting solutions. This year, we try to show our audiences how we have merged the Chat GPT into their **"Learning by Doing"** experiences. You will meet our new solutions in the field of book authoring and data analysis. Learners are no longer expected to 'learn' but to be fully involved in their 'work.'

Please be ready to see how easy and intuitive the work would be!

The AI-supported Authoring Tool
'My Leadership Playbook'

The AI-supported Data Analytics
'My Data Analytics Maker'

Set Your Learning Path with No Restriction

The new 'O2O version of Learning Maker'

Hunet's 'Learning Maker' is one of our typical solutions enabling L&Ders to make their own learning paths with simple clicks. This year, we expand its capacity 'beyond the screen,' which means you can also merge in-person experiences into your journey, just like what you do to your online content!

Please find us and see how you can use this tool to realize hybrid learning experiences, the destination of future L&D.

Make Your People and Workplace "Grow"

The perfect choices for workplace Engagement

Making people connected and engaged in their workplace has always been one of the top priorities for many, as well as for us. Our **"Grow for Works"** mobile app allows employees to set up and engage in 'Challenge,' which is designed to encourage participation, consistent action, and competition. It can be used to run campaigns to cultivate the culture in your company, manage employee well-being programs, and post-training follow-ups. It also contains the 'social feed,' powered by people who leave "Likes" and comments.

Try to stop by and see how you can use this single app to make your workplace a brighter spot!
