Innovation Catalyst

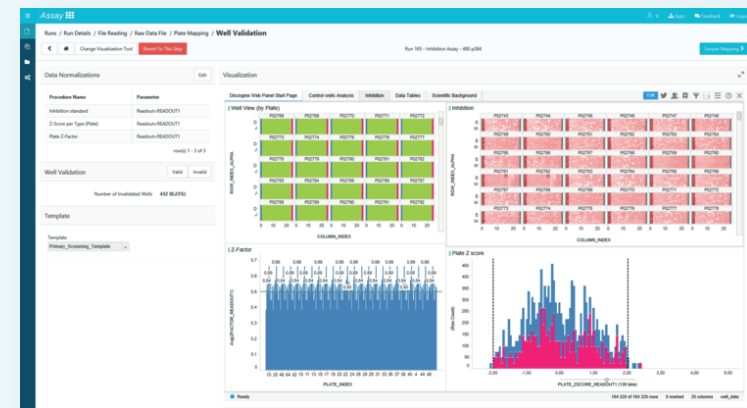

discngine

We help scientists to enhance their research, identify new leads and make their processes more reliable by developing innovative IT solutions

Acquire Data

Managing a Compound Library made easy.

Track where your vials, racks and plates are, and what they contain. Interact with pipetting instruments to prepare your assay plates. Provide **Sample** information to **Assay**.

Analyze Data

High, medium, low. Whatever throughput you are working with, you should be able to focus on science when analyzing your data, not if decimals are separated by a dot or a comma.

Process any plate-based **Assay**. Control the quality of your run thanks to standard statistical descriptors and advanced visual analytics. Standardize how you calculate your end result. Publish them to **Warehouse**, or any other results repository.

High Throughput Discovery

In the last few years, a tremendous increase in the size and complexity of the generated data has been observed in research, Discngine's historical business expertise field. With its solutions, you will meet the challenges of acquiring, analyzing and making sense of this data.

Decision Making Process

In order to make well-informed decisions, you need to have access to the relevant knowledge at hand. Discngine's solutions allow you to manage your knowledge, perform advanced analytics and generate new ideas. Our aim is to make it easy for you to identify the best next step for your project.

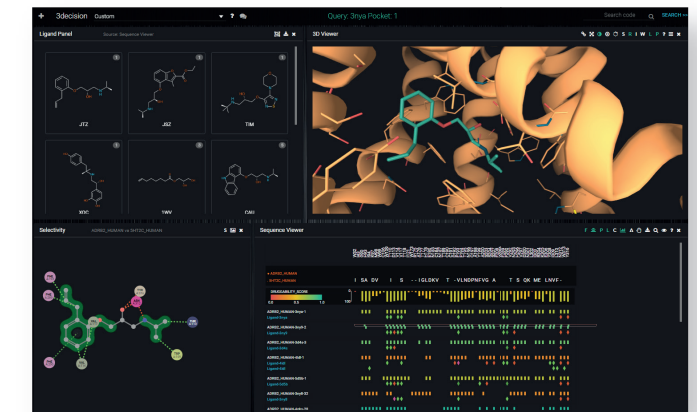

Take decisions

What compound to make next? It's a simple yet crucial question in early drug discovery. The answer is, you need means to easily handle and analyze your data and acquired knowledge.

Gather, analyze & visualize multivariate experimental data within TIBCO™ Spotfire® to rationally and intelligently take a **Decision** and design the next steps in your R&D projects.

Create workflow-based applications which combine advanced data access and manipulation with powerful interactive visualizations with our TIBCO™ Spotfire® **Connector** for BIOVIA Pipeline Pilot.

Capture and foster knowledge generated within structure-based drug discovery projects. Create new knowledge through advanced search and large-scale structural analytics thanks to **3decision®**.

Capture knowledge

Avoid reinventing the wheel by building on collective intelligence and historical knowledge.

Workflow lets you capture the scientific thought process, from hypotheses to conclusions, as the project progresses. By tracking the constant progression of knowledge, you can make faster decisions and never have to worry about losing an idea.

What makes us Unique?

People

At Discngine, almost everybody is dual skilled. Combining knowledge in Biology or Chemistry and Computer Science.

Technology

We use low code platforms, which enable us to produce high added value at a good pace and to avoid reinventing the same thing over and over.

Methodology

Agile methodologies can be found everywhere at Discngine. We use methods like SCRUM or KANBAN to stay on track with our projects and to codevelop solutions with our customers.
