

Custom Automation Solutions

Work with Wako to automate your lab processes: Biological assays, compound management, vial management, high content screening, analytical chemistry, or unique applications and processes.

All Wako Automation systems are powered by Wako's Director Scheduling Software

Director is used to create methods, orchestrate the precise timing of each step and communicate with all of the instruments integrated into your system.

Collaborative Design Process

- ✓ Highly collaborative design process brings your vision to life
- ✓ Simple, effective automation solutions for single purpose systems or flexible designs for systems with multiple functions
- ✓ Flexible scheduler enables multiple methods to be run simultaneously

Customized To Your Needs

- ✓ Industrial robots for powerful 24/7 operation with minimal lifetime servicing
- ✓ Precise collaborative robots for standard biology, chemistry, and analytical chemistry applications
- ✓ Small single arm systems or large multi-arm systems

Specializing in maintaining data quality

Wako metal cell culture lids eliminate edge effects on low volume and/or multiday experiments running on a fully automated system.

They are highly effective when used for manual run assays as well.
