Mesh AI

FAIR CLINICIAN SCHEDULING IN ONE CLICK.

About Mesh AI

Increased workloads, lack of support from leadership, and lack of collaboration among nurses and physicians have been cited as factors that contribute to clinician burnout.

Founded in 2014, Mesh AI is an automated staff scheduling system built with the sole mission of improving the lives of healthcare workers.

Mesh AI has since served thousands of providers across Canada, the United States, and Australia. With roots in academia, the system has been built upon the experiences of working with a wide range of healthcare groups, resulting in a highly customizable system built uniquely for each new team.
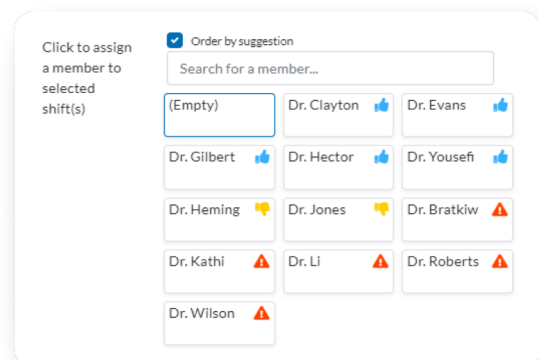

AUTOSCHEDULER

Create staff schedules with a single click.

Reduce the admin overheads related to time-consuming shift and call planning.

RECOMMENDATION ENGINE

Choose the right person for every shift.

Eliminate costly errors, fatigue, and stress due to poor work planning.
