What is SIDS?

- Sudden Infant Death Syndrome (SIDS) is the unexplained death of an infant usually during sleep.
- SIDS is the leading cause of death for babies between the ages of one month and one year.
- Research has identified factors that may put babies at increased risk.
- The American Academy of Pediatrics recommends things you can do to help protect your child from SIDS as outlined in our Dos and Don'ts.

Charlie's Story

Charlie Paul Hutton was born April 15, 2003. In June and Maria Hutton, he was a healthy, beautiful baby boy. He brought so much joy and happiness to his parents and all those he met. On the morning of April 26, 2003, Charlie died from SIDS. He was just three weeks old. Charlie's life was too short, but his impact has been huge. Charlie's Kids Foundation was created in 2013 in memory of Charlie. Charlie's Kids raises awareness of SIDS by educating families, providing resources for parents, grandparents and caregivers and promoting dialogue about SIDS and safe sleep practices.
