CHiLD REGISTRY™

Child Health Improvement through Longitudinal Data

Improving child health and well-being through the use of data

CHiLD REGISTRY™

Child Health Improvement
through Longitudinal Data

MISSION:

The purpose of the CHILD Registry is to enable pediatricians and others who care for children to improve child health and well-being through the use of data.

Children make up 23% of medical patients in the country, and many adult diseases have their roots in childhood.

The Child Health Improvement through Longitudinal Data (CHILD) Registry is a clinical data registry under development with the potential to substantially accelerate advances in infant, children, and adolescent health and improve outcomes by providing reliable clinical data to track the trajectory of their well-being and development from birth into adulthood.

The vision of the CHILD Registry is to provide pediatric stakeholders with the following value drivers:

- Benchmarking and improving quality
- Following and documenting trends in children's health
- Value-based payment programs
- Secondary research and analysis

The CHILD Registry will be a trusted source of information for all stakeholders by containing validated clinical data safeguarded by comprehensive, industry-leading data security and privacy protections.
