

WE LOSE THE EQUIVALENT OF 10 SCHOOL BUSES OF CHILDREN EACH YEAR TO DROWNING.*

From 2011–2020, the CDC reported 8,535 drownings of children under 18. That’s an average of 850 deaths per year. Drowning happens quickly and quietly, and no one layer of protection is enough. Multiple layers of protection are necessary to help reduce the risk of drowning. To learn more about how to keep your children safe in and around water, please visit [NDPA.org](https://www.ndpa.org).

* The average school bus holds 80 children
