Pepticate™ is a hypoallergenic, extensively hydrolyzed infant formula for use under medical supervision and is indicated for cow milk allergy in infants from birth to 12 months.

01/23 GIPEP23-06

NUTRICIA  
**Pepticate™**

For healthcare professionals only,  
not for distribution to the general public

Because parents are looking for relief, and  
they're **counting on you** to find it

**Hypoallergenic formula  
for cow milk allergy (CMA)**  
inspired by components  
of breast milk

**Put a stop to unpleasant CMA symptoms – while  
bringing elements of breast milk to formula**

Give parents peace of mind with Pepticate™: a hypoallergenic, extensively hydrolyzed formula (eHF) for the management of cow milk allergy (CMA). Now, parents can stop worrying about symptoms, and start enjoying more beautiful moments with baby.

**Relief starts here.**

# Provide relief, with the power of Pepticate

On average, a CMA diagnosis can take months<sup>1</sup> – but parents are counting on you to provide relief as soon as possible. When you go straight to the power of Pepticate, you can put parents at ease.

- Hypoallergenic
- Manages CMA symptoms<sup>2</sup> with proven efficacy<sup>3</sup>
- Shown to reduce the prevalence of atopic dermatitis and colic in infants with CMA<sup>2</sup>
- Nutritionally complete
- Well-tolerated in infants with CMA<sup>3</sup>
- Supports growth<sup>3,4</sup>

Pepticate is an extensively hydrolyzed formula (eHF). It undergoes a process in which the allergy-triggering proteins in cow milk are broken down to small peptides and free amino acids, the building blocks of protein. The proteins are carefully produced this way to ensure the formula can be tolerated by infants with CMA.

Hypoallergenic eHFs like Pepticate are **effective in over 90% of cases** of mild-to-moderate CMA symptoms.

For severe CMA cases, your patients may need an amino acid-based formula (AAF) like Neocate<sup>®</sup>.

## Give your patients a good tasting formula to help with adherence<sup>5,6</sup>

Healthcare professionals and parents in the UK who have tried Pepticate say it's the **best tasting eHF**.<sup>\*\*</sup>

Pepticate is a whey based formula with lactose, which is considered to be more palatable than a casein-based eHF.<sup>5-8</sup> A palatable formula may decrease the chance of formula refusal, lead to more content families, and decrease the likelihood of repeat HCP visits due to a decreased need to switch to another formula.<sup>5,6</sup>

# Contains key elements inspired by breast milk

## Lactose

Pepticate contains lactose – found in breast milk<sup>9</sup> – as a source of carbohydrates. Lactose helps make Pepticate **taste better**,\* and is also associated with **improved calcium absorption**<sup>10,11</sup> and **positive effects on the gut microbiome**.<sup>12</sup>

## Prebiotic fiber

Pepticate is the only eHF in the U.S. with galacto-oligosaccharides (GOS) and fructo-oligosaccharides (FOS), shown to **support infant digestive health and immune system development**.<sup>13,14</sup>

## Nucleotides and DHA/ARA

Nucleotides are shown to **support the immune system**,<sup>15</sup> while DHA and ARA **promote brain and eye development**.<sup>16</sup>
