

You give vaccines, **we do the rest.**

We manage the complexities of your vaccine processes and make sure you get the most out of your vaccine program, at no cost to you

We secure your vaccine margins

We purchase and bill for the vaccines you give, so you don't need to worry about spending thousands of dollars upfront or dealing with insurance plans to get paid in full. We also use our provider network to negotiate better payor rates for you.

We automate your operations

With Canid tools, all you need to do is scan the vaccine and it links the vaccine information to the patient record in our system. From there on, we handle billing, inventory tracking, reordering/purchasing and state registry uploads for you.

We help you improve vaccination rates

Our system allows you to find kids that have not received their vaccines. We make it easy for you to follow up and educate your patients so that you can address these gaps in care and improve your HEDIS quality metrics

Canid is here to partner with you to make running a vaccine program easier and financially sustainable for you.
