

IRB Services for Institutional Site Networks

Manage network studies with review processes adapted to your protocol

Advarra has built dedicated, specialized capabilities to serve as the IRB of record for dozens of institutional site networks, including therapeutically specialized groups. We support networks ranging in size from 10 sites to 600.

Experienced sIRB Partner

As the preferred commercial IRB for more than 3,500 institutions, hospitals, health systems, and academic medical centers (AMCs), Advarra has deep experience supporting these sites' unique needs in multicenter trials.

Trust our dedicated institutional team to ensure your network sites have appropriate IRB oversight and local requirements are addressed. Our people, processes, and software provide project transparency, greater control, and real-time monitoring across all studies—no matter the location. For those institutions without formal agreements in place, Advarra can assist you in establishing an agreement and educating the site on the submission process.

Visibility and Control for Coordinating Centers

Get greater transparency, accessibility, and quality oversight for your clinical research programs.

- Customize visibility according to your coordinating center's needs
- Utilize flexible submission processes tailored to your project:
 - You submit on the site's behalf
 - Site submits directly to Advarra

The Advarra Center for IRB Intelligence (CIRBI) Platform enables real-time communication among research sites, study staff, and IRB members. With this fully validated, 21 CFR Part 11 compliant electronic IRB management platform, you get powerful metrics and real-time postings regarding submission status.

Broad Expertise in Every Major Therapeutic Area

- Behavioral Health
- Biobanking
- Cardiology/Vascular
- CNS/Neurology
- Dental/Orthodontics
- Dermatology
